

Complete Project Report

Event	Vorker Intern Tryouts — Phase 1
Date	Thursday, June 11, 2026
Time	16:00 — 18:00 (Stockholm Time)
Stack	Google ADK + NVIDIA NIM (LiteLLM)
Model	Meta Llama 4 Maverick 17B
Team	Solo submission

1. Agent Demo — Live Test Results

The Skattråd agent was tested against all three high-fidelity test cases from the brief. In each case, the agent correctly identified the relevant Swedish authority source and fetched the page content for grounding before responding.

Screenshot: ADK Web UI showing all 3 test cases with source fetches

Test Case 1: VAT Cross-Border SaaS

Query: "What are the VAT implications for a Swedish company selling SaaS to a B2B customer in Norway compared to a B2C customer in Germany?"

Source fetched: [skatteverket.se](https://www.skatteverket.se) — VAT rates and cross-border rules

B2B Norway: Reverse charge (omvänd skattskyldighet) applies — no Swedish VAT charged. B2C Germany: EU OSS rules apply — charge German VAT (19%) and report via Swedish OSS registration at Skatteverket.

Test Case 2: Karensavdrag for Part-Time Employee

Query: "How do I calculate karensavdrag for a part-time employee according to the latest Swedish labor laws?"

Source fetched: [riksdagen.se](https://www.riksdagen.se) — Förordning 2020:400 (Sjuklönelagen)

Karensavdrag = 20% of the employee's average weekly sick pay entitlement. For part-time employees, this is pro-rated based on contracted hours, not full-time equivalent.

Test Case 3: Aktieägaravtal & Hembudsförbehåll

Query: "Explain the specific requirements for an aktieägaravtal regarding the first-right-of-refusal (hembudsförbehåll) in a Swedish AB."

Source fetched: [bolagsverket.se](https://www.bolagsverket.se) — Aktieägaravtal guidance

A hembudsförbehåll (right of first refusal) must be registered in the bolagsordning (articles of association) to be enforceable against third parties. Governed by ABL 4:27. The aktieägaravtal itself is a private agreement between shareholders and is not registered — only the bolagsordning clause has legal force vs third parties.

2. Landing Page — Product Presence

File: landing.html (included in repository)

Hero Section

Headline: "Rätt svar om skatt och lag — alltid källhänvisat"

(Correct answers about tax and law — always sourced)

Subheadline: "Skattråd är din AI-medarbetare för svensk bolagsrätt, moms och arbetsrätt. Varje svar hämtas direkt från Skatteverket, Bolagsverket och verksamt.se."

CTA: "Testa gratis" (Join the beta)

Trust Bar

Displays the four trusted source domains with verification dots: Skatteverket · Bolagsverket · verksamt.se · riksdagen.se — "Alltid med källhänvisning" (Always with source citation)

Interactive Demo Section

Embedded mock chat window showing a real agent conversation: user asks about cross-border VAT for SaaS and karensavdrag, agent responds with structured answers and source citations. Includes visual "searching" indicator to show grounding process.

How It Works — 4 Steps

Step	Title	Description
1	Du ställer en fråga	Any question about Swedish tax, law, or compliance
2	Agenten söker källorna	Searches Skatteverket, Bolagsverket, verksamt.se
3	Du får ett citat med URL	Every claim linked to its source — verifiable in one click
4	Vet när du behöver en revisor	Tells you when professional advice is needed

Pricing Section

Tier	Price	Target	Key features
Fri	0 kr/mo	Trial users	10 queries/mo, basic citations
Solo	149 kr/mo	Frilansare, 1-person AB	Unlimited, full citations, history
Företag	499 kr/mo	Teams (up to 5)	Multi-user, API access, priority support

3. Go-To-Market Strategy

File: gtm.md (included in repository)

Target Market

Sweden has ~400,000 active aktiebolag (AB) and ~250,000 sole traders. The vast majority are micro-businesses (1–10 employees) who cannot afford a dedicated revisor on retainer yet face the same compliance complexity.

Segment	Size	Pain level	WTP
Solo founders / frilansare	~180,000	Very high	150–300 kr/mo
Micro-AB (1–5 employees)	~150,000	Very high	300–800 kr/mo
Small AB (5–20 employees)	~70,000	High	800–2,000 kr/mo

Beachhead: Solo founders and frilansare — highest pain, fastest decision cycle, active online.

Channel Phases

Phase	Timeframe	Channel	Goal
Seed	Weeks 1–4	Manual DMs in Frilansare Sverige FB group	20 beta users
Validate	Month 1–3	SEO content ("How to calculate karensavdrag")	200 signups, 30 paying
Grow	Month 3–6	Partnership with Bokio / Fortnox	Co-marketing to 100k+ users
Scale	Month 6–12	Self-serve + referral program	20,000 kr MRR

Key Partnerships

Partner	Why	What we get
Bokio / Fortnox	Used by 200k+ Swedish SMEs	Embedded distribution
Företagarna	60k SME members	Trust signal + member access
Revisorsbyråer	Overwhelmed with simple queries	B2B white-label revenue
Vorker.ai	AI coworker platform	Infrastructure + go-to-market

90-Day Targets

Metric	Target
Beta users	100
Paying subscribers	25

MRR	4,000 kr (~\$400)
NPS	> 50
Accuracy (spot-checked)	> 90%

4. Pitch Deck — Investor Outline

File: pitch_notes.md (included in repository)

Slide 1 — The Problem (The Compliance Gap)

Sweden has 650,000+ small businesses. Most can't afford a revisor. When they ask AI, they get plausible-sounding answers that may not reflect Swedish law. A wrong VAT answer costs 5–20% in penalties. A missed F-skatt registration freezes business activity. The Compliance Gap: the space between "I need an answer" and "I can trust this answer."

Slide 2 — The Solution

Skattråd is a specialized AI compliance coworker. It doesn't guess — it searches, fetches the actual page from Skatteverket, cites the source, and tells you when to call a human. Built on Google ADK + NVIDIA NIM. One-liner: "The confidence of a revisor, available 24/7, at 1% of the cost."

Slide 3 — Live Demo

Three test cases from the brief, all answered correctly with source citations from the correct Swedish authority. See Section 1 of this report.

Slide 4 — Market

TAM: 650,000 Swedish small businesses. SAM: ~330,000 solo/micro with active compliance needs. ICP: Solo founders, 1–3 years in business, no dedicated revisor. Why now: Swedish regulations change frequently — AI that self-updates via live search has a structural advantage over static knowledge.

Slide 5 — GTM

Phase 1: Frilansare Sverige community (40k members). Phase 2: Bokio/Fortnox integration (200k+ users). Phase 3: White-label for revisorsbyråer. Pricing: 0 kr free → 149 kr/mo Solo → 499 kr/mo Företag.

Slide 6 — Why Vorker

Vorker is building the AI coworker stack. Skattråd is the Swedish compliance module every business coworker needs. Natural integration: when a Vorker user asks their AI coworker about tax — Skattråd handles it. Expansion path: Norway, Finland, Denmark.

Competitive Moat

Alternative	Limitation	Skattråd advantage
ChatGPT / Gemini	Plausible but ungrounded answers	Always sourced, always Swedish
Bokio / Fortnox	Bookkeeping, not compliance Q&A	Complementary — integration partner
Human revisor	2,000–5,000 kr/hour, not on-demand	24/7, 149 kr/mo, verifiable answers

5. Technical Architecture

Skattråd is built on Google ADK with NVIDIA NIM as the language model backend, connected via LiteLLM. The core design principle: **never answer from memory — always search, fetch, cite.**

Component	Technology	Purpose
LLM	NVIDIA NIM — Llama 4 Maverick 17B	Reasoning and response generation
Framework	Google ADK 2.2.0	Agent orchestration, tool management
Bridge	LiteLLM	Connects ADK to NVIDIA NIM endpoint
Grounding Tool	fetch_page_content (custom)	Fetches full text from Swedish authority sites
Domain Filter	Allowlist in tools.py	Only trusted domains: skatteverket.se, bolagsverket.se, verksan
UI	ADK Web (localhost:8000)	Built-in chat interface for demo

Agent Flow

1. User submits a Swedish compliance question
2. Agent analyses the query and identifies the relevant domain
3. Agent calls fetch_page_content with a URL from the trusted domain
4. Tool fetches and extracts plain text from the page (max 4,000 chars)
5. Agent synthesises the answer, cites the source URL, and adds a caveat to consult a revisor for binding decisions
