

Vorker Intern Tryouts: Phase 1

The Search for the Next Generation of AI Pioneers

Date: Thursday, June 11, 2026
Time: 16:00 to 18:00 (Stockholm Time)
Location: Vorker Virtual Office

The Mission: Bridge the Swedish Compliance Gap

Vorker is building the ultimate AI coworker for small businesses. A critical challenge for Swedish entrepreneurs is the "Compliance Gap" where general AI models provide generic or outdated advice that fails to account for the specific legal and fiscal landscape of Sweden.

During this 120 minute high energy session, you will work in teams of 2 (ideally pairing a coder with a non-coder) to create a specialized AI agent. This agent must demonstrate deep expertise in Swedish corporate law and tax regulations, serving as a reliable partner for an SME owner.

Note: Time is extremely limited. Focus on the very basics first and ensure you have a functional core before attempting to polish or add complex features.

The Problem Statement

General purpose AI models are prone to inaccuracies when dealing with niche local regulations. For a business owner, a wrong answer about VAT or labor law is a significant liability. Your agent needs to leverage authoritative sources such as Skatteverket, Bolagsverket, and verksamt.se to provide accurate, grounded, and actionable guidance.

High Fidelity Test Cases

Your agent should be able to handle complex queries that go beyond simple definitions:

- "Explain the specific requirements for an 'aktieägaravtal' regarding the first-right-of-refusal (hembudsförbehåll) in a Swedish AB."
- "How do I calculate 'karensavdrag' for a part-time employee according to the latest Swedish labor laws?"
- "What are the VAT implications for a Swedish company selling SaaS to a B2B customer in Norway compared to a B2C customer in Germany?"

Track Specializations

For Coders: The Architect

Focus on the technical implementation. We value precision and system design over visual polish.

- **Framework:** Familiarize yourself with the **adk** framework. It is a strict requirement for development.
- **Implementation:** Focus on system prompts, response handling, or scraping strategies.
- **API Keys and Resources:** You must obtain your own keys. Use either the direct Google approach or the NVIDIA/LiteLLM approach:
 - **Option 1: Google AI Studio (Gemini)**
 - Get API Key: <https://aistudio.google.com/>
 - **Option 2: NVIDIA Build (Nemotron/DeepSeek)**
 - Get API Key: <https://build.nvidia.com/>
 - ADK Integration Guide: <https://adk.dev/agents/models/litellm/>
 - Supported Providers: https://docs.litellm.ai/docs/contributing/adding_openai_compatible_providers

For Non-Coders: The Strategist

Your role is to transform a technical capability into a viable business asset. You are the bridge between the code and the customer.

- **Creative Freedom:** The deliverables listed below are purely examples. We encourage you to use any medium, tool, or format that best showcases your vision. Whether it is a high-fidelity prototype, a strategic roadmap, or a viral marketing concept, focus on what makes your product unique.
- **Potential Deliverables:**
 - **GTM Strategy:** A detailed Go-To-Market plan identifying target segments within the Swedish SME landscape.
 - **Product Presence:** A landing page (e.g., via Lovable or Framer) or a functional user journey walkthrough.
 - **Commercial Model:** A clear monetization strategy, pricing tiers, and a pitch deck for potential investors.
 - **Growth Engagement:** Promotional assets such as a feature video, a Facebook/LinkedIn ad campaign, or a partnership ecosystem map.
- **Outcome:** Your goal is to pitch the agent as a complete, market-ready product unit.

Rules and Delivery

- **Timeline:** 16:15 Start building. 18:00 Sharp deadline.
- **Submission:** Push all code and assets to a GitHub repository. The final commit timestamp determines eligibility.
- **Verification:** For online assets (like landing pages), include screenshots or a PDF report in the repository.

Innovation happens at the edges. Show us how you solve for the future.
